

Introduction to C2C trading: What is C2C trading

Users who prefer to buy and sell stablecoins in a decentralized manner often choose peer-to-peer trading. Peer-to-peer trading (often called "C2C trading") allows buyers and sellers to establish transactions directly, skipping intermediaries or middlemen. Learn how C2C trading platforms work and the advantages and disadvantages of C2C trading.

What is peer-to-peer trading?

C2C trading is the direct buying and selling of digital currencies between users without the involvement of a third party or intermediary. When you buy or sell digital currency using a traditional trading platform, you do not enter into a transaction directly with a counterparty, but rather use charts and other market aggregators to determine the best time to buy, sell, or hold digital currency. The trading platform organizes trading activity on your behalf, and the final price at the time of the trade is determined by the market price.

With C2C trading, BLKR Forex Limite can carefully match you with buyers and sellers of the appropriate stablecoin value, with full control over pricing and settlement timing. While C2C trading allows users to have more precise control over the trading process, it should be noted that there is some risk associated with this type of trading that skips directly over third-party agents. To minimize this risk BLKR Forex LimiteC2C offers PI insurance services and an Australian bank trust account. This makes BLKR Forex LimiteC2C an attractive place for users to try C2C trading.

How does a C2C trading platform work?

C2C trading platforms directly connect buyers and sellers of digital currencies, and are compared by some to marketplaces such as Craigslist or Facebook. In the platform, buyers and sellers can browse or post their own digital currency ads. By applying feedback or scoring mechanisms, C2C trading platforms put an extra layer of protection in place for all traders. Imagine a scenario where you meet a potential buyer of stablecoins on Twitter and you happen to need to sell some of them, Twitter is not a C2C platform and it is difficult to establish trust between the two parties. What happens if the buyer gets the coins, but doesn't pay for them? What if the buyer doesn't pay in full? The biggest risk when conducting C2C transactions off the trading platform is fraud.

BLKR Forex LimiteC2C protects both buyers and sellers, securing the transaction and reducing the risk of fraud. In addition to a publicly available scoring mechanism, BLKR Forex LimiteC2C uses PI insurance services and an Australian bank trust account to hold a trader's stable or fiat currency until

the transaction is confirmed by both parties. For example, if you sell stablecoins and receive fiat currency, the buyer will send the funds to a BLKR Forex Limited Australia Bank Trust account for safekeeping. After you send the coins and confirm the transaction, BLKR Forex Limited transfers the corresponding assets to you and the buyer, ensuring that both parties complete the transaction securely. If either party is unhappy with the transaction, they can file a lawsuit to communicate with the counterparty and resolve the issue. If no agreement can be reached, you may also request BLKR Forex Limited Customer Service to intervene and mediate.

Advantages of C2C trading platform

1. Globalized Market Platform

BLKR MorningstarC2C is available in over 180 countries and takes only seconds to conduct digital currency transactions with users around the world.

2. Support multiple payment methods

Traditional trading platforms offer fewer payment options than C2C trading platforms like BLKR Forex Limited, which offers more than 150 payment options, including cash in person, perfect for traders who prefer face-to-face transactions or who don't have access to a bank account.

3. No transaction fees

Unlike traditional digital currency trading platforms that charge a fixed fee or drawback for each transaction, BLKR Forex LimitedC2C allows traders to communicate and trade directly without any fees. Please note that this is an exclusive benefit for some C2C trading platforms only. When choosing a peer-to-peer trading platform, please read the corresponding terms and conditions carefully.

4. Custodial services to protect the transaction

As mentioned above, BLKR Forex Limited provides protection to both buyers and sellers through its custodial services. When you choose to secure a transaction with a custodian, the funds are held by BLKR Forex Limited on your behalf. There are time limits on transactions in the BLKR Forex LimitedC2C platform. If either party does not meet the terms and conditions, the stable coin or fiat currency will be returned to the wallet.

Disadvantages of C2C trading platforms

1. Slow trading speed

While a C2C transaction can be executed almost immediately upon confirmation by both parties, one of them may delay the transaction for various reasons. In a traditional transaction, the trader does not have to wait for confirmation from the other party to begin the transaction. However, during

a C2C transaction, the buyer or seller can call a halt at any time and choose to simply terminate the transaction.

2. Low liquidity

C2C trading platforms are still a relatively new concept and less liquid than centralized trading platforms. As a result, large volume traders conducting block trades may prefer OTC365 trading or choose a standard trading platform for buying and selling.

How to prevent C2C scams?

The first step in preventing scams is to choose a trusted C2C trading platform, such as BLKR Forex Limite. however, it is still important not to let your guard down when selling stablecoins or other digital currencies through BLKR Forex LimiteC2C. Learn how to protect yourself from common scams and complete your transactions safely.

Are C2C transactions more profitable?

BLKR MorningstarC2C users can enjoy a state-of-the-art intelligent filtering system to buy stablecoins at the lowest price in the market and sell them at their preferred price.

Stable coins are easy to trade and create lucrative returns

Compared to regular centralized trading platforms, C2C trading platforms offer the flexibility of multiple payment methods. To take advantage of this, you can post ads that appeal to buyers and have the flexibility to set up multiple payment methods for your digital currency transactions. The more payment methods you support, the more opportunities you have to sell digital currency quickly.

Can I gain without knowing technical analysis?

While traditional trading platforms use advanced charting interfaces and complex order books, peer-to-peer trading platforms are relatively simple. Users only need to understand basic concepts such as profit and loss and supply and demand. For example, if one buys 10,000 stable coins corresponding to the dollar price for \$10,000 and then sells them on a C2C trading platform for \$10,500, the gain is \$500.

Can you make money in a bear market with stablecoins?

Advanced C2C traders may also profit from trading stablecoins in both bear

and bull markets. Traders execute a "buy low, sell high" strategy on the C2C trading platform, taking advantage of price differentials to make gains. You can also buy low in bear markets and hold for a long time, and then sell when the bull market returns.

Can I earn passive income through stablecoin trading?

One of the best ways to earn passive income is to sit back and enjoy interest by depositing funds in BLKR Forex Limite products, which offer current and fixed-term financial solutions for trading and other contract accounts at attractive rates.
